

Selected AI Engineering Projects

Production-ready AI engineering applications designed, developed, and deployed to explore Agentic AI, LLM Engineering, QA Automation, and Software Engineering.

Project	Summary
AI SDLC Orchestrator	Multi-agent platform for automating requirements, architecture, development planning, testing, and SDLC workflows.
QA Intelligence MCP Server	Enterprise MCP server with 15+ AI-powered QA tools for testing, automation, and engineering productivity.
GhostQA	Autonomous AI testing agent for exploratory testing, browser automation, and intelligent defect discovery.
FailSight	AI-powered automation failure analysis, flaky test detection, and root-cause intelligence.
SprintPilot AI	AI assistant for sprint planning, story estimation, task decomposition, and Agile execution.
Prompt Lab	Prompt engineering platform for testing, optimizing, and versioning prompts across multiple LLMs.

Professional Experience & Key Contributions

EPAM Systems

Multiple Projects

(03/2024 - Present)

- Architect scalable automation frameworks for Web, API, Mobile, Data Validation, and Enterprise Reporting, establishing reusable components, engineering standards, and framework governance across multiple projects.
- Design and develop automation solutions using Playwright (Java & TypeScript), Selenium, REST Assured, Java, and TestNG, enabling reusable plug-and-play framework components for enterprise teams.
- Designed and implemented a Tableau Validation Automation Framework to automate end-to-end validation of dashboards through backend data reconciliation, report verification, and business rule validation.
- Develop enterprise automation solutions for GCP Storage validation, Dataiku workflow verification, backend API validation, file-based data processing, and automated reporting.
- Build and maintain automation solutions for iOS application testing using XCUITest, while contributing to cross-platform Web and Mobile automation strategies.
- Design API performance validation frameworks using JMeter to benchmark enterprise services and validate application scalability.
- Provide technical leadership through framework architecture, engineering standards, code reviews, mentoring, and close collaboration with Engineering Managers, Architects, Product Owners, and clients to drive quality transformation initiatives.
- Support Pre-Sales, solution consulting, and AI-assisted engineering using Claude Code, GitHub Copilot, EliteA, CodeMie, and MCP to modernize Quality Engineering practices.

PepsiCo India

Business2Business, PepsiCo App

(09/2022 - 03/2024)

- Led the Quality Engineering function for enterprise digital initiatives across multiple global markets. Led distributed QA teams comprising internal and partner engineers across multiple global markets to ensure high-quality software delivery.
- Architected scalable automation frameworks for Web, API, and Android/iOS applications with cloud-based execution, BrowserStack integration, and Azure-enabled testing infrastructure.
- Partnered with Engineering Managers, Product, QA, and external stakeholders to drive automation strategy, delivery governance, knowledge sharing, and quality excellence across global teams.
- Established engineering standards, coding guidelines, quality benchmarks, and process improvements while proactively communicating risks, opportunities, and delivery metrics to engineering and business leadership.

FITTR

Fitr App, iOS & Android

(01/2022 – 09/2022)

- Architected enterprise automation frameworks for API, Mobile, and Performance Testing, enabling scalable quality engineering across cloud-native applications.
- Designed and implemented distributed performance testing solutions using JMeter (Master-Slave architecture) to benchmark backend services and optimize application performance.
- Partnered with Engineering Leadership to define automation architecture and establish engineering standards. Mentored QA engineers and established engineering standards across the organization..
- Collaborated with Infrastructure and DevOps teams to build CI/CD-enabled automation pipelines, performance testing environments, and scheduled validation for cloud-hosted microservices.

Airtel Digital Labs

Shop (Digital Store), Airtel Thanks App

(02/2021 – 01/2022)

- Designed and architected scalable automation frameworks for Web, API, Hybrid Mobile, and Performance Testing, establishing engineering standards, code review practices, test strategies, and automation governance.
- Built end-to-end backend API automation with CI/CD integration, enabling automated execution, reporting, and reliable validation of microservices-based applications.
- Designed automation solutions for synchronous and asynchronous APIs, including mock service development using Spring Boot and WireMock to support independent testing.
- Developed scalable Hybrid Mobile, API, and Performance Testing frameworks using Appium, WebDriverIO, TypeScript, Java, and JMeter while collaborating with Engineering and DevOps teams to improve release quality.

Nagarro Softwares

Assa Abloy, Royal Enfield & Others

(02/2018 – 01/2021)

- Architected scalable automation frameworks for Web, API, Mobile, and Performance Testing across multiple enterprise engagements.
- Led framework design, code reviews, automation strategy, and engineering best practices using Selenium, REST Assured, Appium, JMeter, Spring Boot, and CI/CD.
- Mentored QA engineers while driving framework standardization, engineering governance, and delivery excellence across distributed teams.

Xpert Infotech Services

Multiple Projects

(01/2017 – 02/2018)

- Designed and maintained automation frameworks for Web, API, and Mobile applications using Selenium, REST Assured, Appium, and Java.
- Delivered end-to-end automation solutions while collaborating with Agile teams to improve release quality and automation coverage.

TSYS International Ltd

Pega System

(08/2016 – 12/2016)

- Validated enterprise Banking and Card Payments applications built on PEGA, ensuring quality across critical financial workflows and release cycles.

Times Internet Ltd

TimesPoints & AstroSpeak

(01/2015 – 08/2016)

- Developed Web and Mobile (Android & iOS) automation solutions using Selenium, Appium, Java, and TestNG for consumer-facing digital platforms, supporting functional and regression testing.

Mercer India Pvt Ltd

Autobene

(01/2012 – 02/2015)

- Automated functional and regression testing for enterprise Health & Welfare web applications using Selenium WebDriver and Java, collaborating with cross-functional teams to ensure high-quality software delivery.

Certificates

- Microsoft Certified: Azure AI Fundamentals (AI-900)
- ISTQB® Certified Tester – Foundation Level
